

Matrix Energy cottage kits are designed to provide optimum performance based on your clients described usage. Inverters, Panels and battery size are all matched and sized for optimal performance. This means fewer service calls, less customer education, and happier customers telling their friends about what a great job you did setting up their system.

There are lots of kits out there, but none offer the benefits of a Matrix Energy cottage package.

Cottage Package 1, 2 & 3

Designed for usage May to August. Weekend (2 days) use only. With a planned one day of autonomy and daily consumption of between 1500 – 2400 watts.

Cottage Package 4 & 5

Designed for *light usage* February to October. Weekend (2 days) use only. Designed daily consumption of 1500 to 2400 watts and 2 days of autonomy.

Cottage Package 6 & 7

Designed for those who have a little heavier loads or are planning to use their cottage for weeks at a time and require more autonomy in the event of inclement weather. These kits are also capable of extending the season further into the fall.

Don't go it alone. We can help size your cottage kit in a matter of minutes base on a few simple question and answers supplied by your customer. Call us for help sizing your next kit.
